

Angel Santoyo

Fall 2022

CPSC 349-01-13693

Exercise 1

1. Follow through the assigned chapters 3-10 of *How to Build a Website with HTML*, modifying `index.html` as you go. The resulting file should include the following:

- Inline and block elements
- Nested elements
- A tag with a `style` attribute

Note: again, this is not a habit you should adopt long-term, but is fine for this assignment.

- An `img` tag with a relative path to a JPEG file that you have downloaded locally
- One or more hyperlinks

Note: while you can certainly copy-and-paste the code snippets (the web version of the tutorials even include a handy *Copy* button), in order to learn as quickly as possible you should type the code in yourself. You may even find a mistake or two in the original text.

2. Run `vnu` from the command-line and demonstrate the HTML created by following the book is not valid.

```
student@tuffix-vm:~/Desktop/ex1$ vnu index.html
*file:/home/student/Desktop/ex1/index.html:5:10-5:17: error: Element "title" must not be empty.
*file:/home/student/Desktop/ex1/index.html:17:5-17:71: error: An "img" element must have an "alt" attribute, except under certain conditions. For details, consult guidance on providing text altern
atives for images.
*file:/home/student/Desktop/ex1/index.html:27:1-27:16: error: "<" in attribute name. Probable cause: ">" missing immediately before.
*file:/home/student/Desktop/ex1/index.html:27:1-27:18: error: A slash was not immediately followed by ">".
*file:/home/student/Desktop/ex1/index.html:27:1-27:20: info warning: Attribute "3" is not serializable as XML 1.0.
*file:/home/student/Desktop/ex1/index.html:27:1-27:20: info warning: Element name "h3gt;heading" cannot be represented as XML 1.0.
*file:/home/student/Desktop/ex1/index.html:27:1-27:20: error: Element "h3gt;heading" not allowed as child of element "body" in this context. (Suppressing further errors from this subtree.)
*file:/home/student/Desktop/ex1/index.html:49:1-49:66: error: An "img" element must have an "alt" attribute, except under certain conditions. For details, consult guidance on providing text altern
atives for images.
*file:/home/student/Desktop/ex1/index.html:51:1-51:4: error: Stray end tag "a".
*file:/home/student/Desktop/ex1/index.html:52:1-52:7: error: End tag for "body" seen, but there were unclosed elements.
*file:/home/student/Desktop/ex1/index.html:27:1-27:20: error: Unclosed element "h3gt;heading".
```

3. Modify your HTML file to fix all errors and warnings from `vnu`. Show the resulting HTML source and demonstrate that `vnu` emits no messages.

```
student@tuffix-vm:~/Desktop/ex1$ vnu index.html
student@tuffix-vm:~/Desktop/ex1$
```

4. Demonstrate `Browsersync` running and serving the rendered HTML from <http://localhost:3000/>.

```

• student@tuffix-vm:~/Desktop/ex1$ vnu index.html
• student@tuffix-vm:~/Desktop/ex1$ vnu index.html
• student@tuffix-vm:~/Desktop/ex1$ browser-sync start --server --directory
[Browsersync] Access URLs:
-----
    Local: http://localhost:3000
  External: http://10.0.2.15:3000
-----
    UI: http://localhost:3001
  UI External: http://localhost:3001
-----
[Browsersync] Serving files from: ./

```

Before change

Sammy's Sample HTML

This code is an example of how HTML is written.

It uses HTML tags to structure the text.

It uses HTML to add a [link](#).

And it also uses HTML to add an image:

My strong text

My emphasized text

Heading 1

Heading 2

Heading 3

Heading 4

Heading 5

Heading 6

This text is 40 pixels and green.

[The text you want to link](#) [The text you want to link](#)

5. Submit your results as a single PDF file uploaded to Canvas by the deadline. If you work with another student, only one submission is required as long as it includes the names of both students.
